

THE CUTTING EDGE 2016

DEBATING THE CHOICES IN RHINOPLASTY

36TH AESTHETIC SURGERY SYMPOSIUM

CHAIRMEN: SHERRELL J. ASTON, M.D. DANIEL C. BAKER, M.D. DEAN M. TORIUMI, M.D.

THE WALDORF ASTORIA HOTEL NEW YORK, NEW YORK DECEMBER 1, 2, 3, 2016

Welcome

Marking our 36th year, it is our pleasure to invite you to The Cutting Edge 2016 as we continue the tradition of providing progressive aesthetic plastic surgery education.

Our Course Chairmen, **Dr. Sherrell J. Aston**, **Dr. Daniel C. Baker**, and **Dr. Dean M. Toriumi** have assembled an outstanding faculty of renowned experts who are recognized worldwide as the innovators and developers of the most advanced techniques for rhinoplasty.

Top experts from around the world will debate open and closed techniques for shaping and sculpting the nose. Controversies, complications and long-term results will be discussed in detail.

Accreditation / Designation

COURSE DESCRIPTION

The Cutting Edge 2016 Aesthetic Surgery Symposium is an advanced comprehensive course covering all aspects of rhinoplasty.

A world-renowned faculty of plastic surgeons and facial plastic surgeons, with vast rhinoplasty experience, will present advanced nasal sculpting with open and closed rhinoplasty techniques. Subjects that will be covered in detail include nasal aesthetic balance, sculpting and controlling tip shape, increasing and decreasing projection, shortening and lengthening, correction of alar and columella deformities, dorsal reduction and augmentation, nasal function, correcting the crooked nose, secondary and tertiary rhinoplasty, and variations in rhinoplasty for ethnic and anatomic differences. Fillers and fat are increasingly being used to change nasal appearance. This is a need to know area for all surgeons performing rhinoplasty.

Forty three 5-minute videos and six longer interactive videos will place the audience in the operating room as experts demonstrate specific nasal sculpting techniques.

THE VIDEOS WILL DEMONSTRATE:

- Individual Techniques for Profile Alignment and Osteotomies
- Controlling Nasal Tip Projection and Length
- Deviated Nose and Saddle Nose Deformity
- Managing the Alar Base
- Dorsal Augmentation: How I Do It:
- Finesse in Primary Open Rhinoplasty
- Difficult Secondary Rhinoplasty
- Correcting the Deviated Nose
- Aesthetic Reconstructive Rhinoplasty
- Structural Grafting Using Costal Cartilage
- Extracorporeal Septoplasty: Nuances in Technique

Nine keynote presentations permit in-depth coverage of philosophy and techniques developed during many years of rhinoplasty experience. Fifteen panels will explore difficult rhinoplasty problems, long-term results and complications. Debate between faculty members on controversial areas is anticipated and encouraged. Patient safety, complications and long-term results are stressed throughout this symposium.

LEARNING OBJECTIVES

Upon completion of this course, participants should be able to:

- Define the role of fillers and fat as they relate to nasal aesthetics.
- Evaluate the anatomical basis of perceived nasal deformities.
- Discuss the advantages, disadvantages, complications and long-term results following closed rhinoplasty.
- Discuss the advantages, disadvantages, complications and long-term results following open rhinoplasty.
- Recognize variations in techniques performed in ethnic rhinoplasty.
- Discuss the complications and difficulties associated with primary, secondary and tertiary rhinoplasty.
